

DON'T DUMP IT!

Don't put prescription or over-the-counter medications down any drains:

Drugs that treatment facilities are unable to remove can:

contaminate rivers, lakes, and streams

harm fish and other aquatic life

end up in our drinking water

How can you help?

Drop medications off at a take-back site! Find one at [MetroWaterRecovery.com/meds](https://www.metrowaterrecovery.com/meds)

If the take-back option is not available, do the following:

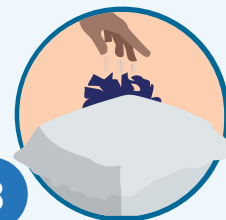

1

Remove medications from the original packaging and place them in a sealable container or bag.

2

Mix with something undesirable, like kitty litter or coffee grounds. Securely close the container or bag.

3

Wrap the container or bag with other discarded items (such as newspaper) to conceal the contents. Place it in your trash.

METRO WATER RECOVERY

We get your water.
